

Welcome to Systemvetardagen 2024

For the twenty-eighth consecutive year, Systemvetardagen is being organized—a meeting point for students, companies, and organizations within the IT industry. It's a place where your company has a unique opportunity to showcase itself to students from some of Sweden's leading IT and communication programs.

On February 21, 2024, it's time for Systemvetardagen, the event organized by students from the Department of Computer and Systems Sciences (DSV) at Stockholm University. Throughout the day, you will have a unique opportunity to network with potential candidates, including both students with a few years left in their education and those who are nearing the end of their studies. What unites them all is their interest in learning more about their potential future employers.

Meeting Rooms

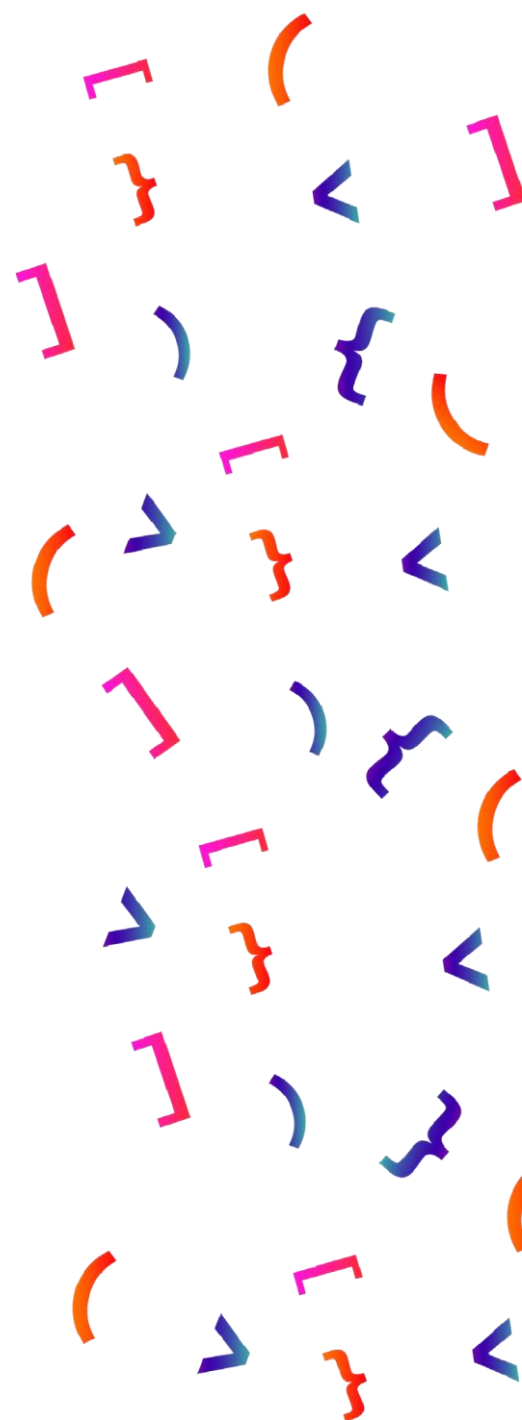

Let us help you connect with the right students during the expo day, and digitally the day after! We offer a unique recruitment service that allows you to identify the right talent for your company, directly from the universities.

This is done through our matching service where you are paired with the type of candidate you are looking for. The offering enables you to filter based on education and graduation year and provides access to the selected students' CVs. According to your preferences, we ensure that only the students you wish to meet during the expo can book a meeting with you.

In addition to matching and booking, an individual room for your meetings is included during the expo day. The room is at your disposal throughout Systemvetardagen, from 10:00 to 16:00. With 15 minutes per conversation, you have the opportunity to conduct up to 24 personal meetings with candidates who match what you are seeking. For digital meetings the following day, you can choose your preferred video conferencing service.

We at Systemvetardagen hope that you'll seize this fantastic opportunity to interview handpicked candidates who are eagerly waiting to be recruited by your company!

The service is provided in collaboration with Student Node.
